

TRUBLUE WEBBING CONNECTOR

SELECTION GUIDE

TRIPLE ACTION CARABINERS

The perfect combination of safety and functionality for protecting users on climbing walls. Our triple-action carabiners are auto-locking and mounted on a swivel to prevent the webbing from becoming twisted. This swivel ensures optimal retraction, while also extending the lifespan of the webbing.

HOW TRIPLE ACTION WORKS:

- 1 Slide the metal collar down
- 2 Twist the collar
- 3 Push inwards to open the gate

Once the collar is released, the carabiner will snap shut, automatically locking into place. Recommended facilities: Climbing gyms and rec centers

STEEL SWIVEL CARABINER

- Our standard connector
- Durable and long lasting
- Ideal for indoor gyms

ALUMINUM TRIPLE ACTION CARABINER

- Lighter than steel
- Full-strength attachment point for optional backup
- Ideal for outdoor use and corrosive environments

ADVENTURE WEBBING

Adventure Webbing incorporates a Petzl S Swivel to allow for greater connection point variability, while still maintaining the necessary swivel function of the webbing. Up to 3 carabiners can be connected to the loading point of the swivel at one time.

Regardless of intended use, it is important not to bypass the swivel with any connectors, as this will cause the webbing to twist and could damage the webbing, along with internal auto belay components.

Recommended facilities: Adventure parks and unique operations

RECOMMENDED USES:

- Secondary connectors
- Smart and/or continuous belays
- Custom connectors

OPEN LOOP WEBBING

Open Loop webbing provides facilities with the opportunity to attach Anti-Release Connectors to their TRUBLUE Auto Belays. Anti-Release Connectors are designed to mitigate accidental clipping errors and prevent accidental webbing releases. They present an excellent alternative to carabiners for facilities with high numbers of novice climbers.

Recommended facilities: Fun climbs, FECs, and operations that rent out climbing equipment

 Approved connectors for Open Loop webbing: headrushtech.com/approved-connectors

SELF BELAY

- Key required to unlock connector from harness
- Provides increased control to Operators
- Integrated swivel
- headrushtech.com/self-belay

BELAYMATE

- Developed by Clip 'n' Climb
- Special attachment to Auto Belay Gate required to unlock connector from harness
- Integrated swivel
- clipnclimb.com/our-products/belaymate
